Results-driven Software Engineer and QUT Computer Science graduate with hands-on experience in full-stack web development, cloud deployments (AWS/Azure), data analytics, and AI solutions. Award-winning hackathon winner with a proven track record of building user-focused applications, automating business workflows, and communicating technical solutions effectively to stakeholders.

SKILLS

- **Programming Languages:** Python, C, C#, Java, JavaScript, TypeScript
- **Web & Frontend Development:** HTML, CSS, Bootstrap, React.js, React Native, Express.js, Node.js, Vite, Rest APIs
- **Data Science & Machine Learning:** Machine Learning, Deep Learning, Sklearn, Keras, TensorFlow, Pandas, NumPy, Matplotlib, Seaborn, Azure Machine Learning, Computer Vision, NLP, Generative AI
- **Cloud, DevOps & Databases:** AWS, Azure (Azure SQL, Azure Cosmos DB, Azure Data Factory), Docker, GitHub, Linux, SQL, Relational & Non-Relational Databases
- **Enterprise & AI Solutions:** Microsoft Power Platform, Power BI, CRM, AI Prompting & Collaboration, Azure Cognitive Services / AI Services, Responsible AI, Azure Bot Service

EXPERIENCE

Consultant Intern

DynamX Institute

Apr 2026 ~ May 2026

Gold Coast, Australia

The client (small local library admins) relied on manual, paper-based processes to track inventory and loans, leading to data entry errors and high administrative effort. To resolve this, I built an end-to-end digital library management system using Microsoft Power Platform. The new online environment eliminated paper workflows, reduced data errors, enabled remote borrowing for members, and provided administrators with a centralised platform to manage and analyse library data in one place.

- Built an automated Power Platform environment to replace paper operations for small local library admins.
 - Developed a Canvas App for kiosk tablets and a Model-Driven App for admins to track inventory and loans.
 - Designed Power Automate flows for loan confirmations, due date tracking, and automated reminder emails.
 - Built a Power Pages portal allowing members to browse the catalogue and submit loan requests remotely.
 - Configured Dataverse as a centralised database to securely manage real-time library data and user transactions.
-

Web Developer & Data Analyst (Part-time)

Caravansera

Jun 2025 ~ Present

Brisbane, Australia

As a Web Developer and Data Analyst, I delivered front-of-house service while using data analysis and web development to enhance the restaurant's operations and digital presence. I assisted management in identifying sales trends, refining the website layout, and shaping promotional strategies to boost customer engagement and profitability.

- Increased revenue by 5% by analysing sales trends to optimise menu offerings.
- Refined website layout to improve customer engagement and navigation efficiency.
- Leveraged sales data, driving a 10% increase in high-margin item orders through targeted pricing.

PROJECTS

Future Scope

Technical Leader

Aug 2025

Code Network Hackathon

As Technical Leader for Future Scope, I guided a team of four from ideation to delivery during the Code Network Hackathon under the theme "Re-imagining the Future". To address how many people have ambitious goals but lack clarity on the required skills and knowledge, we built an interactive, AI-powered web application that generates detailed, actionable roadmaps. By combining modern front-end technologies with robust back-end services and AI integration, our team delivered a fully functional prototype that won first place at the hackathon.

- Led project ideation, feature prioritisation, and technical strategy to align with hackathon requirements.
- Built an interactive web UI using JavaScript and React.js for seamless user goal tracking.
- Developed Node.js services and integrated OpenAI API to automate AI-driven roadmap generation.
- Utilised PostgreSQL to handle user authentication and securely store goal-tracking data.
- Containerised the application with Docker and deployed it onto an AWS EC2 instance.

Bionauts Website

Frontend Developer

Jun 2025 ~ Nov 2025

Bionauts

As Frontend Developer for Bionauts, I built an interactive nature adventure platform that helps students learn about wildlife and enables teachers to easily book educational field trips. I developed a user-friendly frontend that streamlines trip bookings for educators while driving student engagement through photo story sharing and direct Q&A with registered scientists.

- Built a student-focused web frontend using HTML, JavaScript, Bootstrap, CSS, and Node.js.
- Facilitated efficient team workflows and version control by managing multiple GitHub branches.
- Enabled teachers to easily search, evaluate, and book outdoor nature adventures for students.
- Integrated Instagram style story sharing and photo posting tools for interactive student learning.
- Developed interactive Q&A features connecting students directly with teachers and scientists.

EDUCATION

Bachelor of Information Technology

Feb 2024 ~ Dec 2025

- **Major:** Computer Science | **Minor:** CGI (Computer Generated Imagery)
- Queensland University of Technology

Diploma in Information Technology

Jul 2023 ~ Feb 2024

- Queensland University of Technology

ACHIEVEMENTS

- **Winner – 1st Place:** Code Network Winter Hackathon Winner Aug 2025
- **Microsoft Certified:** Power Platform Fundamentals May 2026
- **Microsoft Certified:** Azure Data Fundamentals Feb 2025
- **Microsoft Certified:** Azure AI Fundamentals Feb 2025
- **Academic Award:** Executive Deans' Commendation of Academic Excellence (QUT) Jun 2024

COMMUNITY

Code Network

- Project Manager

Feb 2025 ~ Jun 2025
